DETAILED ACTION

1. The following is an examiner's statement of reasons for allowance:

The invention relates to a process of forming a laminated sheet material from a slurry having a liquid component, the method comprising the steps of: applying the slurry to a substrate in successive layers to form a wet sheet of predetermined thickness; applying at least one of the layers by spatter; removing the wet sheet from the substrate; and drying or curing the wet sheet to remove at least a substantial portion of the liquid component and thereby form the sheet material. This method of spattering permits self-leveling of the layer which prevents run-off, thus providing an accurately controlled intermit application process of the supply of slurry to the apparatus especially in the production of high speed sheet materials.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such
